DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, 61-63 and 65-70, drawn to a method for recovering plant cells using serial washing step in media having successively reduced concentrations of cryoprotective agent and a stabilizer, classified in class 435, subclass 410.
- II. Claim 22, drawn to a method for recovering plant cells using washing in a medium having a cryoprotective agent and plating cells on a medium having reduced concentration of the cryoprotective agent, classified in class 536, subclass 1.11.
- III. Claims 23, 25, and 71-75, drawn to a method for recovering plant cells using washing in medium having reduced concentration of one kind of cryoprotective agent and also having another cryoprotective agent present therein and also can contain the inorganic active ingredient, silver nitrate, and removing both of the cryoprotective agents and further plating the cells on media that contain reduced concentrations of the cryoprotective agents, classified in class 424, subclass 600.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are directed to related processes. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed can have a materially different desing or mode of operation because Group I does not require the plating steps of Groups II and III and further does not include silver nitrate as does Group III.

Further, Group II can include one cryoprotective agent and does not include different cryoprotective agents and further does not include silver nitrate where as Group III includes two different cryoprotective agents and their removal on media having reduced concentrations of the agents and also includes silver nitrate. Thus, different process steps and ingredients for the varied media necessary to carry out the different and distinct claimed have a different mode of operation or different design.

Furthermore, the inventions as claimed do not encompass overlapping subject matter as each require a different design or mode of operation, and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/015,939

Art Unit: 1651

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah K. Ware whose telephone number is 571-272-0924. The examiner can normally be reached on 9:30-6:00.

Application/Control Number: 10/015,939 Page 5

Art Unit: 1651

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
